

Hello and **THANK YOU** for downloading this sound library!

This is a free sample pack of hand-picked sounds from my personal collection of field recordings and designed sounds over the past few years. All of the sounds were recorded with various Zoom recorders (Zoom H1, Zoom H4n Pro, and Zoom H6 (both XY and MS capsules) at 44.1kHz and 16/24-bit (varying between each sound). Feel free to read 'Sound List – 44.1 General Library (Samples)' for the full sound list that details every sound that is included in this library with an extended description of how each sound was made and audio information.

If you enjoyed this free sample pack then do please consider grabbing the full library [here](#)!

TERMINOLOGY

In this library you will frequently find file names that include words such as "LOOP", "Multi", "Close" and other terms. Here are the definitions of these terms and what they mean:

- **"Close/Very Close"**: The sound was recorded close/very close to the recorder
- **"Exterior"**: The sound was recorded from outside (e.g. the outside of a car)
- **"Interior"**: The sound was recorded from within the subject (e.g. inside an airplane cabin)
- **"LOOP"**: Added to the end of a file name; the sound is seamlessly loopable
- **"Multi"**: The sound has multiple events, as opposed to a single, one-time event (e.g. multiple birdsong extracts in a single file)
- **"Single"**: The sound is a single event (e.g. a single footstep)

FAQ

- **Do I need to credit you or the library in my project?**
 - Only if you want to! Do [contact me](#) if you use any of these sounds in your project and I would be more than happy to help spread awareness of your project!
- **Can I use these sounds in commercial projects to make money?**
 - Yes! Just so long as you aren't using these sounds to create your own commercial sample library, any other project is absolutely fine!
